

# SOFT4 INVENTORY

INVENTORY MANAGEMENT  
SOLUTION

# WHY SOFT4INVENTORY?

Soft4Inventory is an inventory management solution for production and commerce companies, which can be integrated with any business management system. This quick pay off tool enables management of inventory and financial information in a single system and helps to increase the company's profits. The system optimises inventory levels, allows efficient use of warehouses and saves employee time.

1

## EASY TO USE

By completing simple daily tasks defined in the role center.

2

## FLEXIBLE SOLUTION

Can be easily integrated with any ERP system.

3

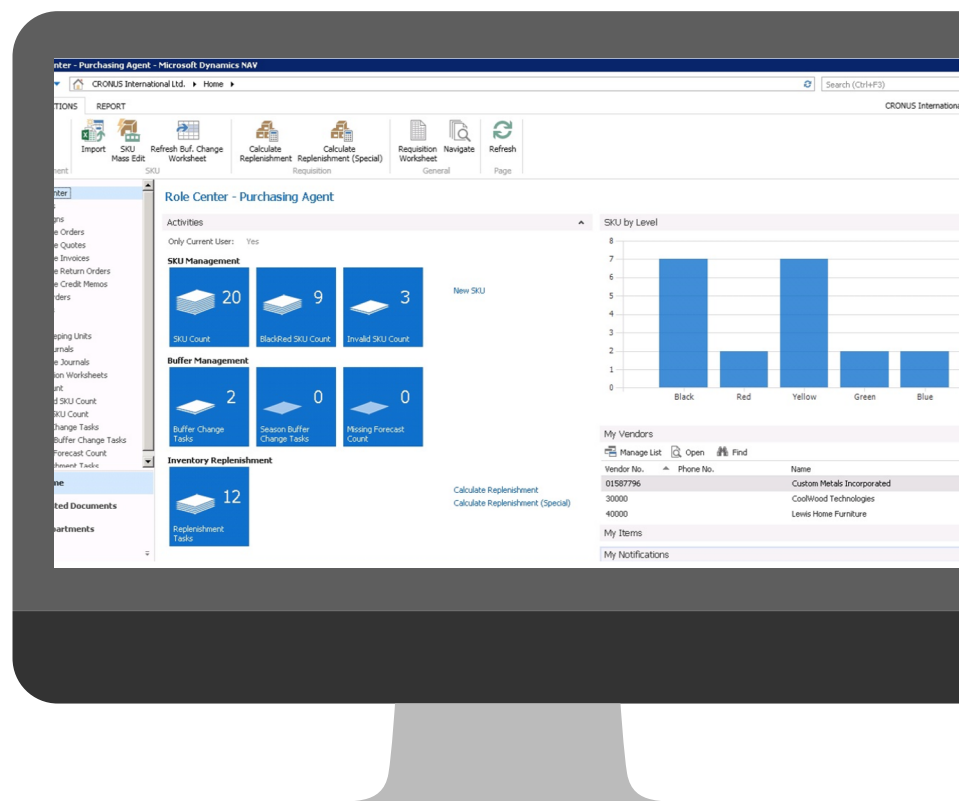

## QUICK PAY OFF

Clients report a significant increase in inventory efficiency within 2-4 months.

4

## THREE PRODUCT LEVELS

Solution is available in three packages depending on business needs.

# SOFT4 INVENTORY – YOUR WAY INTO COGNITIVE INVENTORY MANAGEMENT

## Why Cognitive?

When dealing with uncertainties in inventory planning because future demand is unknown or partially unknown, analysis of the narrow scope of data alone such as historical sales data (which is still the common case in inventory forecasting tools) is insufficient for efficient and effective inventory management.

A wider scope of data must be evaluated in cases:

- When market conditions change rapidly.
- When external events (like weather, fashion trends etc.) make a greater impact on inventory demand than analysis of historical trends may predict.
- When a product is in the beginning or end phase of its life cycle.
- When the life cycle of product is too short to collect consistent data.
- When competition inside a company's product range changes due to assortment or price strategy changes.
- When historical data may not be applied to upcoming periods with the desired accuracy.

Cognitive inventory management is the software's built-in process which helps to evaluate additional data that is important for the quality of inventory management (including external and unstructured) when calculating inventory demand.

## Soft4Inventory

Soft4Inventory is a platform which delivers cognitive inventory management process with built in tools for day-to-day inventory replenishment and procurement decisions and operations.

## Soft4Inventory functionality consists of:

- Role center based process control tool.
- Item and location setup.
- Optimal inventory calculation processor.
- Machine/human/AI (artificial intelligence) collaboration interface.
- Optimization engine for replenishment and procurement quantities.
- KPI reporting for process of ongoing improvement.

# EASY TO USE

## SOFT4INVENTORY PRODUCT LEVELS

All further described levels have human/machine collaboration based process with great responsibility on the machine in the more advanced levels.

### Basic Level

Human intelligence based cognitvity combined with historical inventory data analysis.

### Intermediate Level

Human intelligence based cognitvity combined with dynamic inventory state analysis which allows the machine to evaluate important factors besides historical consumption.

### Advanced Level - under development

AI model based cognitvity using human intelligence as support power combined with dynamic inventory state analysis which allows the machine to evaluate important factors besides historical consumption.

## What makes our clients happy?

# 39%

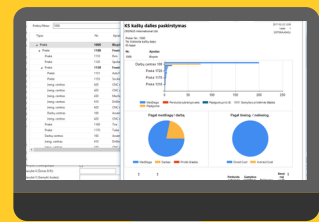

*Inventory level down to 39% in 2-4 months*

# 20%

*Sales increase of up to 20%*

# 50%

*Customer service improvement up to 50%*
